SUMMARY

Software engineer with experience in tackling complex challenges. I've contributed to projects across diverse industries, multiple countries, remote and onsite, building reliable solutions that enhance user experiences.

EDUCATION

Bahir Dar University
Bachelor of Software Engineering

Bahir Dar, Ethiopia

EXPERIENCE

Backend Engineer at [EllaTech](#)

Addis Ababa, Ethiopia | Jan 2026 – Present

- Developed and maintained Dockerized NestJS microservices with MongoDB, designed for scalable, distributed systems.
- Implemented gRPC and RabbitMQ based inter-service communication, improving service-to-service efficiency and reducing HTTP overhead.
- Implemented a multi-tier subscription system with billing, scheduled events using BullMQ, graceful downgrades as well as tier-based access control.
- Owned CI/CD pipelines and production deployments on AWS, improving release reliability and reducing manual deployment effort.
- Contributed to an existing backend using HonoJS, PostgreSQL, and Drizzle ORM, shipping features in a live production environment.
- Integrated and maintained Stripe payment workflows, supporting secure and reliable transaction processing.

Full Stack Engineer at [Bamboosim](#)

Sydney, Australia | Mar 2025 – Oct 2025

- Spearheaded the development of key features for an ongoing project, delivering full-stack solutions using NestJS, React and Next.js.
- Enhanced the e-commerce platform by integrating and optimizing Stripe and PayPal payment gateways, improving transaction capabilities. Worked with colleagues to craft a seamless integration between backend and frontend.
- Engineered a high-priority, multi-environment relay queuing microservice using BullMQ and Redis to circumvent external API rate limits (2 requests/minute), ensuring seamless data flow and system reliability.
- Implemented robust customer engagement features including a promo code discount system, a referral program, and a reward code functionality, driving user acquisition and retention.
- Managed and executed application deployments to Google Cloud Platform (GCP) using Cloud Build for CI/CD pipelines and Cloud Run for containerized service hosting, ensuring efficient and scalable releases.

Full Stack Engineer at [Engida Travel Technologies](#)

Addis Ababa, Ethiopia | Feb 2025 – Dec 2025

- Led full-stack development of a bus ticketing system used by thousands in Ethiopia, utilizing React and NestJS.
- Developed features for generating invoices, receipts, and tickets with cancellation and termination capabilities.
- Integrated local payment systems including Telebirr, Chapa, and CBE, increasing payment option accessibility.
- Engineered a ticketing module supporting millions of concurrent bookings with real-time availability updates.

Backend Developer Intern at
[Ewenet Communications PLC](#)

Addis Ababa, Ethiopia | May 2024 – Sep 2024

- Demonstrated proficiency in NestJS, Express.js and API development.
- Created a secure and robust backend service capable of withstanding stress.
- Worked with colleagues to craft a seamless integration between backend and frontend.
- Collaborated with cross-functional teams, enhancing communication and teamwork skills.

PROJECTS

Wise — Persistent memory for code explanations

TypeScript, SQLite, MCP, ts-morph

- Built an MCP server exposing five tools to Claude Code, Cursor, and other AI clients, storing plain-English code explanations in SQLite outside the repo.
- Used ts-morph AST fingerprinting so staleness tracks logic, not formatting — changed code returns a diff to refresh instead of a full re-explanation.
- Added opt-in in-code anchors that survive symbol renames and file moves, self-healing stored locators on read.
- Shipped a VS Code extension (`.vsix`) with hover explanations, plus a localhost viewer with prose and code diffs.
- Kept 216 tests green across three packages under one CI gate; caught a macOS/Linux platform bug and a 10× oversized package before release.

Amiro — Bookmark manager with curator attribution and AI tagging

TypeScript, Next.js, Convex, Chrome MV3, Turborepo

- Designed a 19-table, 58-index Convex schema serving three clients — Next.js 16 web app, Chrome MV3 extension, Telegram bot — with 13 bearer-authed HTTP endpoints for the two that can't hold a reactive session.
- Built a share-attribution graph that credits the curator who introduced a link: idempotent claim rows keep each (saver, bookmark) pair counted exactly once across four counter tables, an event log, and owner notifications.
- Layered tagging in two tiers — deterministic type tags at write time, then a cron-batched Gemini pass (40/run, model-fallback chain, daily quota) writing to a URL-canonicalised cache shared across users so a link is classified once globally.
- Shipped an offline-first MV3 clipper: captures queue to `chrome.storage` and drain on a background alarm, plus one-click import of the browser's bookmark tree and Netscape HTML export.

Sewlesew — Community crowdsourcing platform

React, Context API, NestJS, Express.js, PostgreSQL, Prisma, Docker

- Built a platform for individuals and businesses to launch campaigns and raise funds, with a secure backend managing campaigns, donations, and user interactions.
- Integrated payment processing with transaction tracking and status updates, protected by authentication and authorization.
- Added campaign status tracking, goal progress visualization, and donor anonymity options.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Dart, Python, Java

Frameworks: NestJS, Next.js, React, Vue, Node.js, HonoJS, Express.js, Flutter

Databases: PostgreSQL, MySQL, MongoDB, SQLite, Redis, Hive

Technologies: REST APIs, GraphQL, WebSockets, gRPC, tRPC

Tools & Platforms: Docker, GCP, Prisma, Drizzle, TypeORM, BullMQ, Postman, Firebase, Git
